Hiring Team

pay.com.au

Melbourne, VIC

**Re:** AI Solutions Engineer

Dear Hiring Team,

I am applying for the AI Solutions Engineer role at pay.com.au. I want the build-first work in your ad: sit with teams, turn vague asks into scoped problems, and ship automations that hold up in production and actually get used — with AI only where it earns its place.

That is how I already work. At Prodegee I owned core pieces of a national-scale pipeline (7.2M building polygons; 18,121 schools across three countries), built evaluation harnesses when outputs misbehaved, and pushed back on flattering metrics — including correcting a published baseline from 6–13% to 37% and publishing a negative result when a proximity penalty hurt accuracy. I also built a Claude API router that classifies request complexity before choosing a model, so cost and capability stay proportional.

For packaging and AI enablement — including MCPs — I built an MCP server that lets Claude Code or Cursor delegate lightweight tasks to a local Gemma model and fails open when Ollama is unavailable, and I authored five reusable Claude Code / Cursor skills others can pick up and run. For discovery with non-technical stakeholders, I wrote functional requirements (scope, decision log, acceptance criteria) with the Melbourne Grand Mosque committee before shipping an Android app now in use by community members.

I do not claim years of internal ops automation across sales and marketing, or prior payments/PII production work. What I bring is production-minded Python and TypeScript, fluency with Claude, Cursor and MCPs, orchestration experience via Kestra, and the habit of choosing conventional software when it is the better call (for example choosing a lightweight OpenCV detector over a heavier model when latency mattered). I am based in Melbourne, available immediately, hold full Australian working rights on a Temporary Graduate visa (subclass 485) with no sponsorship required, and am ready to complete a National Police Record Check.

I would welcome the chance to discuss how I can help pay.com.au refine and automate the processes that no longer scale by hand.

Yours sincerely,

**Faraaz Mohammed**
