RE: AI ENGINEER — ONE51

6 November 2026

Hiring Team, One51

Dear Hiring Team,

I am applying for the AI Engineer role at One51 as one of the emerging AI professionals your recruitment process welcomes. I want to build generative-AI and machine-learning solutions for clients, and to learn the consulting side of that work from a specialist data and AI firm.

Generative AI and RAG. I built a retrieval-grounded (RAG) chatbot with anti-hallucination constraints, deployed on Vercel. I also built an MCP server that hands lightweight tasks to a local Gemma model and falls back to a frontier model when the local one is unavailable. User feedback from that tool curates a dataset for QLoRA fine-tuning. In my AI/ML internship at Prodegee, I built a Claude API router that matches each task to the cheapest model able to handle it.

Data, ML and evaluation for an industry partner. At Prodegee (an RMIT industry capstone), I built the geolocation algorithm at the core of the team's pipeline over 7.2M building polygons, run on 18,121 schools across three countries. My IoU and sensitivity harnesses found the real causes of failures, including the parameter behind a 90% under-count. I led 3 of 10 assignments, was primary author of 3 of 4 formal deliverables and wrote the handoff contracts between teams.

Requirements to delivery. At Vayaa I turn plain-language requests into numbered requirements and a decision log, and I took a Python (FastAPI) and PostgreSQL service live on AWS with CloudFormation.

To be direct about the gaps: I have internship-level experience rather than three years, and I have not yet worked on Microsoft Fabric, Azure, Databricks or Snowflake. My cloud work so far is on AWS. I am in Melbourne, hold full Australian working rights (Temporary Graduate visa, subclass 485, no sponsorship required), am available immediately and am open to relocating to Sydney.

Yours sincerely,

Faraaz Mohammed
